

II. SPECIFICATION AMENDMENTS:

Please replace the Abstract on page 25, as rewritten below:

ABSTRACT

~~An object of the invention is a~~ A method is provided for inquiring about information relating to a mobile terminal (MS) of a cellular network, ~~from the cellular network~~ from a messaging server (MMSC) external to the cellular network. ~~The method comprises sending an~~ An inquiry is sent from the messaging server (MMSC) to the cellular network, ~~to determine said information relating to the terminal (MS), the inquiry comprising an external~~ a first identifier for identifying said terminal. ~~(MS), the first identifier being a specific identifier external to the cellular network.~~ In the cellular network ~~said~~ the first identifier is mapped to a ~~specific~~ second internal identifier, ~~which is an internal identifier of the cellular network.~~ Said ~~The~~ information relating to the terminal (MS) is determined with the aid of said second identifier. ~~A~~ and a responsive message is sent from ~~the~~ the cellular network to said messaging server. ~~(MMSC) external to the cellular network in response to said inquiry.~~ In the response message, said information relating to the terminal (MS) ~~is indicated with the aid of said~~ by the first identifier. Furthermore, ~~an object of the invention is a system implementing the method and a server (MMSC) and a network element of a cellular network (GGSN), as well as computer program products implementing the method.~~
